## Swivel Caster Forks

precise maintenance-free bearings

Precision 2 Series swivel forks feature durable stainless steel construction and permanently sealed metal-housed bearings that eliminate the need for monitoring and maintenance of the bearing structure. Swivel mechanism is a "zero end

play" design that yields smooth running and precise movement. Forks can be paired with a variety of 5 and 6-in. wheel products.

## Dual-Density Wheel

combines hard & soft tread traits

Trans-forma wheel is suitable for both hard-tread use where clean, easy rolling is needed, and for soft-tread use where quiet, cushioned rolling is required. An economical alternative

to its 4-6 Series stable-tomer tread chemically bonded to a tough, waffle-design polyolefin wheel core.

## Elastomer Wheels

stand up to high-temps, steam, etc.

Thermoplastic elastomer wheels with tough polyolefin cores are ideal for medical and food processing environments requiring strength and durability during washdown operations and hot, wet cleaning processes. Wheels have a

single molded and sealed stainless steel ball bearing insert and glass-filled nylon thread guard to ensure long life with no maintenance.

## Combo Caster Wheel

weds hard & soft-tread benefits

Trans-forma HD Series wheel offers the durability of hard-tread wheels with the features of softer tread products that allow it to cushion and endure impacts. The extra-hard TPE tread resists water damage associated with

hydrolysis from wet, punishing applications. Wheel material also resists flat-spotting from heavy loads over long periods.
