Colson Caster Corp., a manufacturer of standard and custom caster and wheel products, is now offering a new wheel bearing for use in quiet and clean environments. The new Hand Truck Bearing is designed for Colson's 4 and 5 Series Performa Hand Truck Wheels.

The bearings are made of carbon steel and provide smooth and quiet operation. Because they are completely sealed to keep grease in and debris out, there is no maintenance or lubrication required. Replacing Colson's Radial Ball Bearing for Hand Trucks, the new bearing is sized at 5/8 inches inner dimension (ID) x 1 3/8 inches outer dimension (OD). A 3/4 inch ID x 1 3/8 OD will also be available soon.
